

BULLETIN NUMBER GT559, 9 OCTOBER 1992

New BACNAT for Global System Manager (SCO Unix)

This reseller bulletin is to announce the release of a new BACNAT for Global System Manager V7.0 and V8.0 (SCO Unix).

This new BACNAT includes changes to the signal handling for SCO Unix in order to fix a problem that causes the glintd process to go <defunct> as evidenced by an examination of the Unix process table (using the 'ps' command). The main symptom for System Manager users is a frozen screen.

The modification has been made with the co-operation of the SCO Technical Support Centre.

The change only affects the BACNATs for CV5522 and CV5527. No other System Manager CVs are affected.

The version of the new BACNAT is V3.79.

The new software should be installed using the 'glinstall -u' command.
