

BULLETIN NUMBER GT598, 25 MARCH 1993

## Global 3000 ledgers and distribution software version 4.1A now available

After an extended delay while the software has been subjected to external and internal testing, the remaining six modules of Global 3000 version 4.1A are now available and join the already-released Intrastat software.

Please note that version 4.1A Global 3000 Product Maintenance is needed if any other Global 3000 module is used. Global 3000 Product Maintenance is available free-of-charge.

There are six manuals – one for each of the ledgers and distribution suite modules, plus one set of notes and one release notice for all the Global 3000 modules.

The interfaces to other modules are as shown in both issue 12 of the handbook and bulletin GT578 for version 4.1, with the obvious exception that version 4.1A software requires other version 4.1A software to interface to.

We apologise to our resellers for the delay in testing and production of this software and hope it has not inconvenienced you too much. Please place your orders now.
