

# **Global System Manager (Unix) for HP-UX V9**

This Global technical bulletin is to announce the verification of Global System Manager (Unix) V8.0 on HP-UX version 9 on the HP-9000.

System Manager is a Unix application; all peripheral devices (e.g. printers) are accessed via Unix. The Unix systems file determines the run-time configuration.

Tape backup is performed from within the Unix operating system.

The minimum price code at which System Managers and applications can be ordered is X. In other words, single-user and 2-3 screen systems are not available.

Please note:

- Configuration notes C5540 and C5541 should be ordered for more detailed information on the exact configuration. For more details or any queries, please contact Martin Procter at the City office.
- Systems for configuration C5540 are distributed on 3½" diskettes.
- Systems for configuration C5541 are distributed on QIC-120 tapes.
- This is a 'LAN' system (as are all V8.0 Unix systems). LAN pricing therefore applies.
- This configuration will operate on HP-9000 computers running HP-UX V8 or V9.
- The option to hold C-ISAM format Speedbase databases is available for this configuration.
- \$TAPE is not currently supported on the HP-9000.
- The machine code is C2.
- Paragraph 3.0.4g on page 114 of issue 13 of the Reseller Handbook summarises the support position for the configurations.
