

# **Global Integrator version 2.0A available**

## **INTRODUCTION**

TIS Software is pleased to announce the release of version 2.0A of Global Integrator, a software package that allows data held in Global files to be exported to the host operating system. 'Global Integrator' is the new name for Global DOS Integration.

## **FEATURES OF GLOBAL INTEGRATOR VERSION 2.0A**

Version 2.0A of Global Integrator is very similar to what we used to call DOS Integration version 2.0. The one difference is the support of version 4.2 (rather than version 4.1A) of the Global 3000 applications.

## **UPGRADING FROM VERSION 2.0**

There is no need to run any upgrade program if you have been using version 2.0. You need merely install the version 2.0A software and run it.

## **DOCUMENTATION**

A new set of Global Integrator Notes (MDINV2.0A) is available. Resellers who wish to look into Global Integrator in detail may wish to order a copy of this document. There is also a very short version 2.0A Release Notice, MDIRV2.0A, which explains the minor differences between versions 2.0 and 2.0A.

## **PRICING**

Global Integrator V2.0A will have a fixed price of £250 (less reseller discount) irrespective of the number of screens. This special launch price will apply only for versions 2.0 and 2.0A. Version 2.1 which will allow two-way integration will have a scaled price from £200 (1 screen) to £3,000 (99 screens).

Users of version 2.0 can upgrade to version 2.0A for a £50 copy charge.

Resellers can order Global Integrator for £30.

## **AVAILABILITY AND SUPPORT OF VERSION 2.0**

Version 2.0 will be available for supply until 31st January 1995. It will be supported until 30th April 1996.

The default version of Global Integrator will change to 2.0A as from today.

## INTERFACES

Version 2.0A of Global Integrator is **not** restricted to operating on System Manager for MS-DOS. It will operate on version 8.0 of System Manager or System Manager PM for any operating system. It will produce ASCII text files suitable for import into various DOS applications, including Lotus 1-2-3 and WordPerfect.

Most of the extraction of information is done via the run-time components of Global Reporter version 1.0; these are provided free-of-charge on the Global Integrator diskettes. However, in order to amend the details of what is extracted from a Global application, and to understand some of the error messages Global Integrator displays, you will need version 1.0 of Global Reporter.

Global Integrator will extract information from the following Global applications:

- Versions 6.2 and 6.3 of Global 2000 Sales Ledger;
- Version 6.2 of Global 2000 Stock Control;
- Version 6.0 of Global 2000 Nominal Ledger;
- Version 6.3 of Global Sales Analysis;
- Version 4.2 of Global 3000 Creditors Ledger;
- Version 4.2 of Global 3000 Debtors Ledger;
- Version 4.2 of Global 3000 General Ledger;
- Version 4.2 of Global 3000 Stock Control;
- Version 1.0 of Global Finder;
- Version 6.2 of Global Payroll.

Please consult the Global Integrator Notes mentioned above for full details of the above interfaces.

There are facilities in Global Integrator to allow an interface to applications other than the above.
