Update for Autozap Run 7050

A problem has been found with the "Zap options" function in AZINS. This function includes a baseline option "Z. copy" to extract zaps and re-packaged components. Under some circumstances zaps or repackages are not correctly extracted. This problem has been fixed by zap AZ2005. However, zap AZ2005 has not been applied to the copy of P.AZINS distributed with autozap run 7050.

Use the "Z copy" function in AZINS to create zap AZ2005 and apply the repackage of AZ210 to P.AZINS on the first autozap diskette before creating any other zaps or repackages from the autozap run.
