

TECHNICAL BULLETIN FROM GLOBAL BUSINESS SYSTEMS

BULLETIN NUMBER GT785, 31 JANUARY 1996

Enhancements to Global System Manager for BOS, MS-DOS, Windows and Novell NetWare Nucleus variant V4.3

This bulletin announces a major repackaging of Global System Manager (BOS), Global System Manager (MS-DOS and Windows) and Global System Manager (Novell NetWare). The changes to the Global System Manager nucleus are independent of the version of Global System Manager and apply to Global System Manager V7.0, Global System Manager V8.0 and Global System Manager V8.1.

The variant number for the new nucleus and BACNAT software is V4.3.

The V4.3 nucleus release is fully described in the Global System Manager V8.1 Notes (document MSMNV8.1). This document will be despatched with all Global System Manager V8.1 orders generated after Tuesday 30-Jan-1996.

The V4.3 nucleus software and the Global System Manager V8.1 Notes are both available on the BBS.
