

## **TECHNICAL BULLETIN FROM GLOBAL BUSINESS SYSTEMS**

**BULLETIN NUMBER GT797, 13 MAY 1996**

# **Global Technology Meeting**

The next meeting of the Global Technology Special Interest Group takes place as previously announced at 14:00 on 15 May in the City Office, 75 Farringdon Road.

The main topic on the agenda will be Windows: look and feel issues, and suggestions for improvements; enhancements to allow desktop integration between Global applications and Windows products; and discussion of the 32 bit Windows 95/NT port and its future development. We want to identify some real-world integration requirements so we can focus the discussion, so please bring along any requirements you have.

We also expect Bob Sadler, the developer of the Speedbase/Btrieve implementation, to be attending.

If you intend coming please contact Noel Leaver (or leave a message with reception at the City office), and let us know if you have any particular topics you would like adding to the agenda.
