

# ***TECHNICAL BULLETIN FROM GLOBAL BUSINESS SYSTEMS***

**BULLETIN NUMBER GT873, 2 OCTOBER 1998**

## **Speedbase Btrieve and Pervasive SQL Version 7 (Btrieve 7)**

This bulletin announces the port of Speedbase Btrieve to Pervasive SQL Version 7 (aka Btrieve 7) for both GSM (Novell) and GSM (Windows NT) configurations. The changes affect the BACNAT software for the following configuration codes:-

- 5611 GSM (Novell)
- 5613 GSM (Novell)
- 5661 GSM (Windows NT) diskette distribution
- 5663 GSM (Windows NT) CD distribution

The changes only affect the Speedbase Btrieve NLM (SPEEDBAS.NLM) and Gateway (SPEEDBAS.EXE). No changes to the Speedbase utilities (e.g.\$BADN) or sub-routines (e.g.BA\$OPN) are required. All existing Btrieve-aware applications will operate unchanged on Btrieve 7.

For GSM (Novell) configurations, in addition to releasing a new version of the SPEEDBAS.NLM this repackaging also includes a new version of GSM.NLM. For GSM (Windows NT) configurations, in addition to releasing a new version of the SPEEDBAS.EXE this repackaging also includes a new version of GLCONS.EXE. Please refer to the GSM V8.1 Notes (MSMNV8.1) and Configuration Notes for further details.

The revised BACNAT software is available at a copy charge for all users on service who are upgrading from earlier versions of Global System Manager (Novell) or Global System Manager (Windows NT).

If you have any questions regarding the above information please contact the Service Centre at the City office.
