TECHNICAL BULLETIN FROM GLOBAL BUSINESS SYSTEMS

BULLETIN NUMBER GT885, 7 DECEMBER 1998

Global Reporter Version 1.4

Global Business Systems is pleased to announce the release of Global Reporter V1.4. This version includes the following enhancements:

- The run-time size of Global Reporter has been reduced by moving some functionality into memory pages. This allows larger reports to be compiled and executed;

- The maximum page size limit of 9999 has been removed. Reports of up to 32760 pages can now be created;

- Two new functions SIN (Signed Integer) and SFA (Signed Fraction) return the signed integer and signed fraction parts of a number respectively.

Important note: Global Reporter V1.4 will only operate with Global System Manager V8.1i, or later.

Global Reporter V1.4 is priced at £50.00 as an upgrade to users on service, and is available as a product at the same price as Global Reporter V1.1, £990.00, regardless of the number of users.

Astute readers may wonder about Global Reporter versions 1.2 and 1.3. These were internal versions of Global Reporter that were never released externally and have been superseded by version 1.4.

Please note Reporter 1.4 is required for use with Global 3000 V4.5.
