TECHNICAL BULLETIN FROM GLOBAL BUSINESS SYSTEMS

BULLETIN NUMBER GT911, 27 JULY 2000

Warning messages displayed during GSM startup

As the need arises, usually in response to a Hotline problem, new GSM components will be released as zaps or repackages. It is possible that certain combinations of new components and existing, installed GSM configurations will generate the following specific warning message when GSM is loaded:

        INITIATION WARNING 302 - $MONITOR VERSION V8.1n; $STARC VERSION V8.1m

(where n is different from m).

This particular warning message (i.e. code 302) is for information purposes only and can be safely ignored. Other INITIATION WARNING messages (i.e. when the code is **not** 302) should not be ignored and should be reported to the Service Centre in the normal way.
