BULLETIN NUMBER GT913, 12 OCTOBER 2000

GSM (Windows) Master Class

As a result of a suggestion made at the Reseller Conference a GSM (Windows) Master Class is being arranged.

The 1-day training session will cover GSM (Windows) installation and customisation, paying particular attention to the new software features that have been added recently.

The Master Class is aimed primarily at Support and Implementation staff. Although Development and Sales staff are welcome to attend, the Master Class will concentrate on support, implementation, configuration and roll-out issues.

The session is expected to be interactive so please bring along any questions, queries or suggestions that you may have.

Precise details of the date (or dates) and location will be announced once an approximate number of attendees has been obtained. A day during mid November-2000 has been tentatively booked for the first Master Class.

If you have an interest in attending a GSM (Windows) Master Class please contact Alan Underwood (alan@tissoft.co.uk) at the City office quoting "Master Class" in the subject of the email.
