

**TECHNICAL BULLETIN FROM GLOBAL BUSINESS SYSTEMS**

**BULLETIN NUMBER GT914, 25 OCTOBER 2000**

## **Global 3000 - GX and online documentation master class**

As a result of a number of suggestions made during the Global 3000 V5.0 and GX beta-test a Master Class for Application Developers and Technical Authors is being arranged.

The 1-day training session will consist of 2 parts: The morning session will cover the new coding techniques used by Global 3000 V5.0 that integrate closely with the Global Application Explorer (GX). The afternoon session will describe how the online documentation that is now available with Global 3000 V5.0 was developed; and will provide suggestions for adapting the same techniques with reseller applications.

The morning session is targeted at Application Developers. The afternoon session is targeted at Technical Authors.

Precise details of the date (or dates) and location will be announced once an approximate number of attendees has been obtained. A day during late November 2000 has been tentatively booked.

If you have an interest in attending the Global 3000 - GX and Online Documentation Master Class please contact David Featley ([djf@tissoft.co.uk](mailto:djf@tissoft.co.uk)) at the City office quoting "Global 3000 Master Class" in the subject of the email and stating whether you wish to attend the morning session, or the afternoon session, or both.

A further training day for Application Programmers will be held in December 2000 to cover the many new features that are currently being implemented in the 32-bit Development System.
