

TECHNICAL BULLETIN FROM GLOBAL BUSINESS SYSTEMS

BULLETIN NUMBER GT916, 22 NOVEMBER 2000

Thin-Client Applet (TCA) Beta-test now available

The beta-test version of the Global Thin-Client Applet (TCA) is now available as a download from the Global Web-site. This software allows any Global application to run inside an Internet browser (preferably Internet Explorer 5) via a Web Server. A Web Server in the City office, dedicated for this TCA beta-test (and the forth-coming TCA beta-test), is running the Global 3000 V5.0 beta-test software. Resellers can use the Global TCA to run Global applications "across the net".

Please read the notes supplied with the beta-test software (which can be downloaded from the Global web-site), for full details of the installation, operation and functionality of the Global TCA. These notes also explain how to run Global applications from the Web Server running in the City office.

If you have any queries regarding the above information please contact Alan Underwood (alan@tisoft.co.uk) at the City office.
